ANTARCTIC EXPLORATION

Antarctica is a cruising ground like no other. Snow-capped mountains rise directly from the sea and tower overhead, glaciers end in thundering ice cliffs at the water's edge, leaving icebergs strewn across the fjords. Penguin colonies line the shores, seals bask on ice floes, and humpback, minke and orca whales can be spotted just offshore. The austral summer brings long hours of daylight and milder temperatures, but this is still an extreme environment: weather and ice shape the journey as much as the itinerary, so plans stay flexible to follow the best conditions.

The voyage starts in Punta Arenas, flying across the Drake Passage, between Cape Horn and the South Shetland Islands, in about two hours rather than the two days it takes by sea, to land on King George Island and join M/Y *Hanse Explorer*. From there the yacht crosses the Bransfield Strait to the Antarctic Peninsula, where the coast is lined with channels, bays and fjords to explore.

Days combine time on the water and ashore: Zodiac cruising and paddling among icebergs, landings at penguin colonies, and visits to historic sites left by the pioneering sealers, whalers and explorers who followed the first sightings of Antarctica in 1820. Between outings, M/Y *Hanse Explorer* is your basecamp, among the most comfortable places on the entire continent to relax and recharge, spot wildlife from the decks, or take in the constantly changing view as you cruise through this magnificent landscape.

ITINERARY

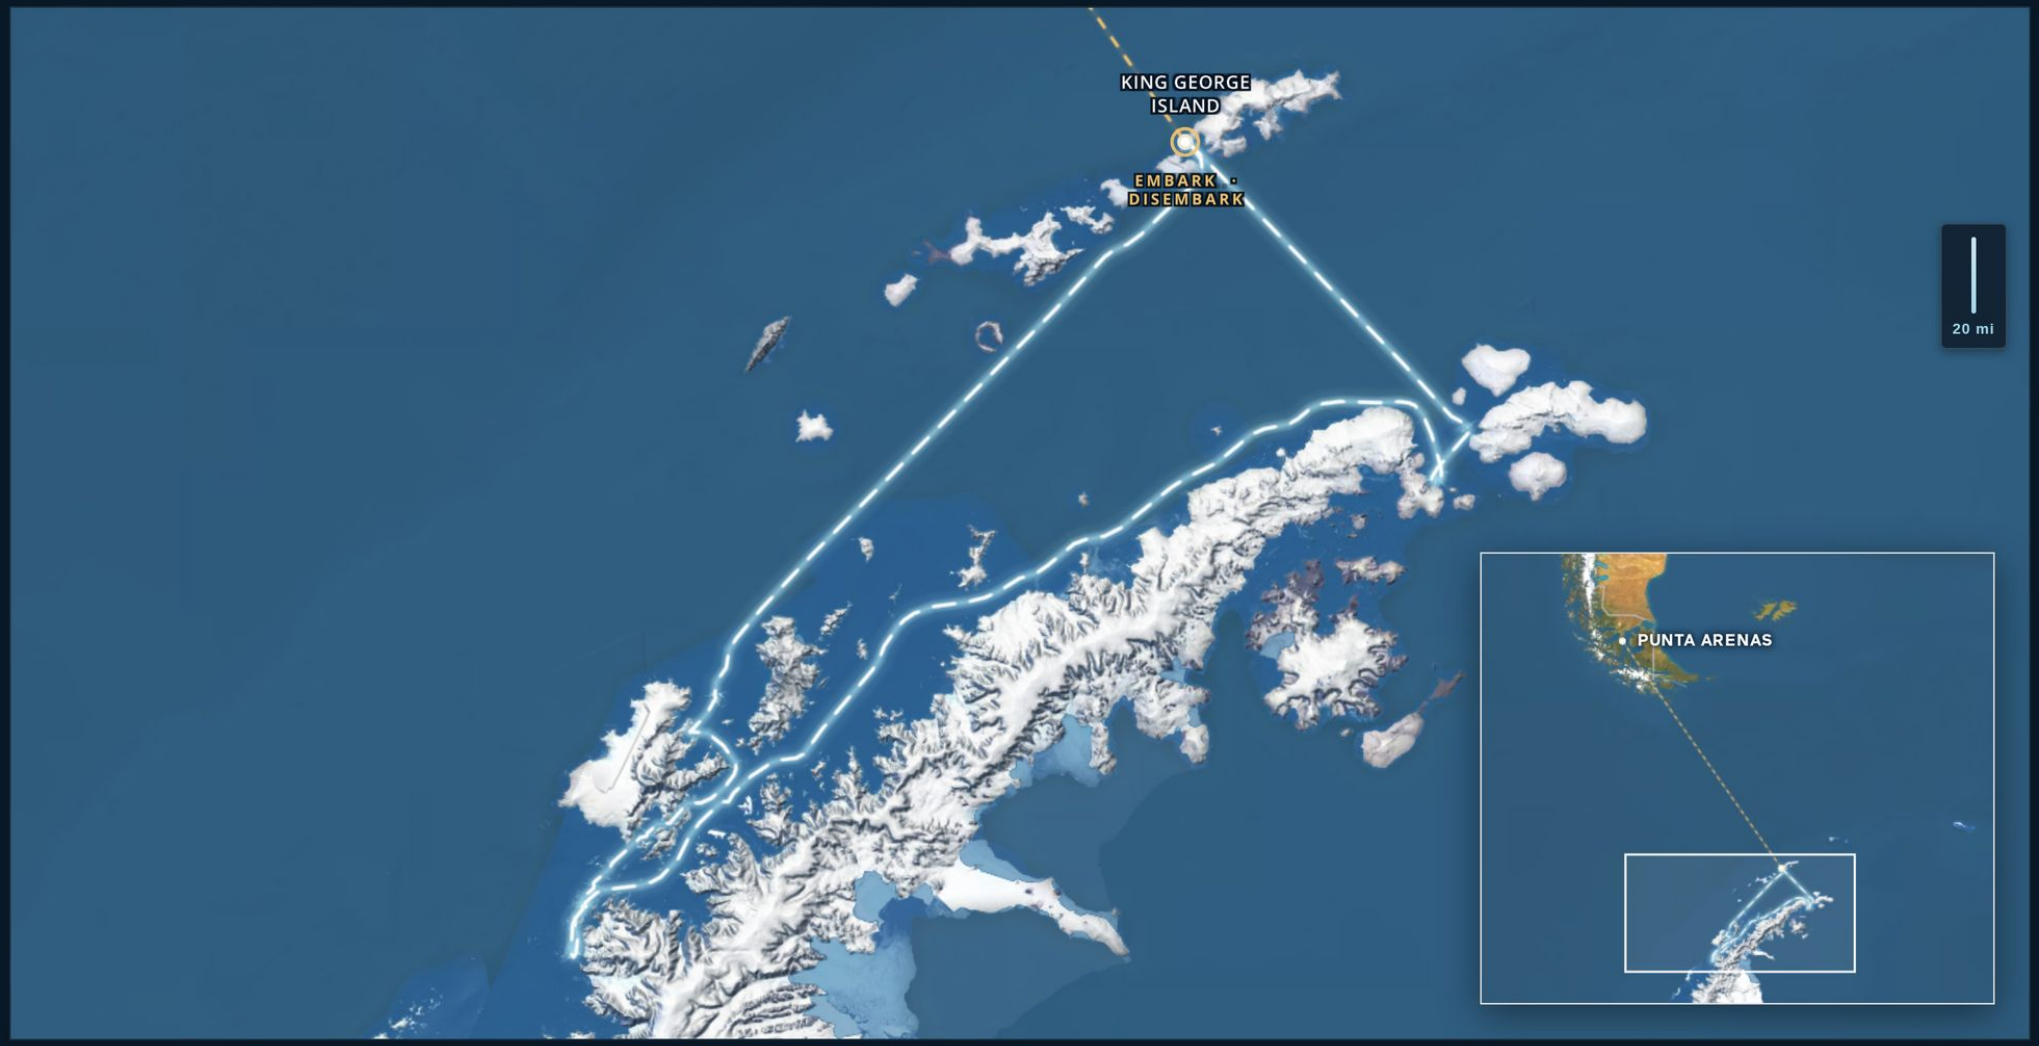

Aboard M/Y *Hanse Explorer* · 23 December 2026 – 2 January 2027

Your itinerary is flexible to make the best of weather and ice conditions. Each day your Captain and Expedition Team will discuss options with the group to deliver a customized experience based on your preferences as you explore Antarctica.

ROUTE MAP

Map showing the approximate route planned for M/Y *Hanse Explorer* in Antarctica. Each voyage is unique, planned around weather and ice conditions, so the actual itinerary and sites visited will vary.

ROUTE CHARTER FLIGHT

PUNTA ARENAS, CHILE

Arrive in Punta Arenas, a historic port city on the Strait of Magellan, and transfer to your hotel. This evening there will be a briefing on travel to Antarctica, including an update on the estimated flight departure time.

The charter flight is scheduled to depart Punta Arenas on **December 23rd**, with the departure time to be confirmed. Timing depends on the weather in Antarctica on the day, so flexibility is required and our team on the ground will provide regular updates. In some cases, the weather may delay departure by several hours or even a day. Booking two hotel nights in Punta Arenas (the night before and the night of the scheduled departure) allows you to keep your room as long as required.

KING GEORGE ISLAND, ANTARCTICA

Transfer to the airport for your flight to King George Island, Antarctica. Departure time is subject to weather in Antarctica, but once airborne, flying time aboard this specially equipped aircraft is just 2 hours.

Crossing the Drake Passage by air instead of sea provides a safe, fast and efficient crossing of this infamous stretch of water, often cited as one of the roughest seas on Earth. The use of a multi-engine jet aircraft cuts the crossing down from two days to just a couple of hours as you fly directly from Punta Arenas to King George Island.

Land on the airstrip belonging to the Chilean 'Presidente Eduardo Frei M.' base and transfer to M/Y *Hanse Explorer*. After settling in on board and briefings on Antarctic safety, the yacht departs towards the Antarctic peninsula and the first expedition landings of the voyage.

Days 2-10 EXAMPLES OF SITES YOU MAY VISIT DURING YOUR VOYAGE

SOUTH SHETLAND ISLANDS

In addition to King George Island, you may visit some of the other islands in the group. These wildlife-rich islands are on the edge of the Drake Passage at the northern extent of Antarctica. Numerous penguin colonies, seals and seabirds inhabit the islands and the South Shetlands have an interesting history from the sealing and whaling eras.

DECEPTION ISLAND

Deception Island is the flooded caldera of a volcano that last erupted in the 1970s. As well as fascinating geology and a history of shore-based whaling, the island is home to one of the region's largest chinstrap penguin colonies.

ANTARCTIC SOUND & THE WEDDELL SEA

Known as Iceberg Alley, Antarctic Sound is at the very northeastern point of the Antarctic Peninsula, where large tabular icebergs drift in the Weddell Sea. We may land and visit Adélie penguin colonies at Paulet Island, Brown Bluff, Devil Island, or elsewhere in the area.

Explore the fringes of the Weddell Sea on the eastern side of the Antarctic Peninsula and search ice floes for emperor penguins, which breed on nearby Snow Hill Island during the winter. The magnificent adult birds are hard to find during the summer months when their colonies have dispersed but there is the chance of finding a newly fledged juvenile resting on the ice.

THE DANCO COAST & GERLACHE STRAIT

On the western side of the Antarctic Peninsula, spend several days exploring the numerous islands and channels of this breathtakingly scenic area. Around these islands, visit gentoo penguin colonies and cruise with the yacht and tenders amongst icebergs, past immense glaciers and ice cliffs. Many whales can be seen including humpback, minke and orca and multiple species of seal are abundant.

M/Y *Hanse Explorer* may visit highlights such as Paradise Bay, Errera Channel, Neko Harbour, Port Lockroy, Lemaire Channel, Petermann Island and Booth Island. The choices are many, and all offer interesting landscapes and wildlife experiences.

Day 11 SAT · DISEMBARK

KING GEORGE ISLAND TO PUNTA ARENAS

At the end of your expedition on **January 2**, M/Y *Hanse Explorer* will return to King George Island for your flight back to Punta Arenas. As with your arrival flight, departure time will depend entirely on Antarctica's highly variable weather. When the weather window opens, transfer from the yacht to the airstrip at the Chilean airbase to board a charter aircraft for the 2-hour flight back to Punta Arenas.

EXPEDITION ACTIVITIES

The Expedition Leader offers versatile, active options each day based on the conditions and interests of the group.

LANDINGS

Step ashore to experience this remarkable landscape by foot, visit penguin colonies, historical sites or just go for a short hike.

TENDER CRUISING

Navigate among icebergs and along rugged coastlines or view marine wildlife in their natural element.

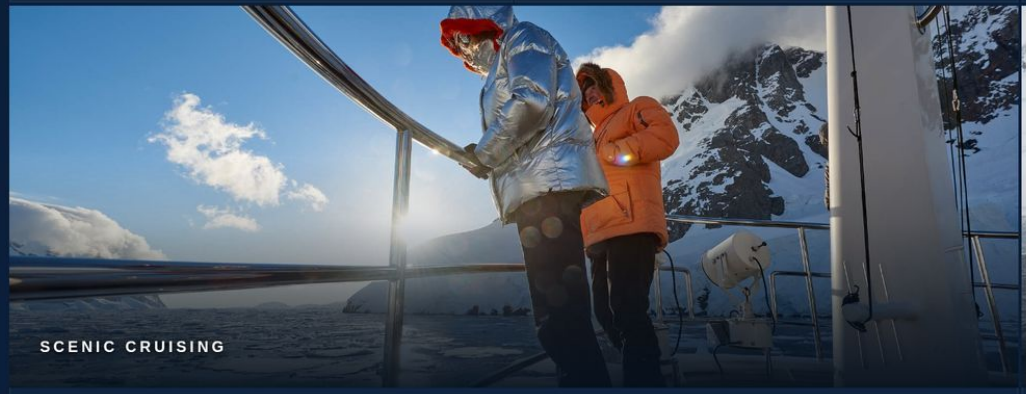

PADDLE SPORTS

Explore sheltered waters at a quieter pace, taking in the surrounding scenery from as close to sea level as it gets.

POLAR PLUNGE

Take an exhilarating dip in Antarctic waters for a memorable, albeit extremely brief, immersion in the polar environment.

SCENIC CRUISING

Enjoy views of dramatic glaciers, icebergs and mountains from the comfort of the vessel as it navigates Antarctic waters.

WILDLIFE WATCHING

Observe penguins, seals, whales and seabirds in their natural habitats, with opportunities to learn about their behaviour and adaptations to polar life.

WHAT TO BRING

Conditions in Antarctica can be severe and inhospitable and suitable clothing is necessary to protect you from the elements. Please carefully review the information below and the following gear list to ensure you pack accordingly.

Summer temperatures around the Antarctic Peninsula are typically just above freezing during the day and just below freezing during the night. Expect morning lows of about -5°C (20°F) and daytime highs of around +7°C (45°F). Bear in mind that strong winds and sea spray can make these temperatures feel significantly colder.

Dress typically consists of casual and practical clothing. The clothes you would bring on a ski holiday are a good guide; layers of warm clothes to wear on landings, warm casual clothes for wearing on board, and a warm jacket to wear on deck. For landings, we recommend dressing in layers to allow you to adjust your insulation during changing conditions.

TYPICAL DRESS FOR A LANDING · TOP

- [ ] Thermal underwear
- [ ] Lightweight fleece / thermal top
- [ ] Heavy fleece top / sweater / parka liner
- [ ] Parka / waterproof shell

TYPICAL DRESS FOR A LANDING · BOTTOM

- [ ] Thermal underwear (long johns)
- [ ] Comfortable trousers · if insulated you may not need long johns
- [ ] Waterproof trousers
- [ ] Waterproof rubber boots

EYOS GEAR

> EYOS Expeditions works with the most experienced polar expedition outfitting service, offering a full range of Antarctic clothing. A complete package may be purchased, or simply the components you require. New Headings offers rental boots and other expedition gear in Punta Arenas. Please visit the website for further details: **eyos.newheadings.com**

GEAR LIST

CLOTHING

- [ ] 1 full set of thermal or silk long underwear
- [ ] 3 or 4 pairs of warm, sturdy, tall thick socks, wool, smart wool, or synthetic, for wearing with rubber boots
- [ ] 2 or 3 warm long-sleeved shirts for casual wear and layering
- [ ] 2 or 3 warm woollen or polar fleece sweaters. A combination of lighter and heavier sweaters is preferable for greater flexibility
- [ ] 2 pairs of warm, comfortable trousers to wear under your waterproof pants
- [ ] A bathing suit for a "polar plunge" or the yacht's jacuzzi

OUTERWEAR

- [ ] Waterproof parka or shell jacket for landings, Zodiac/Tender rides and time on deck
- [ ] Waterproof, breathable pants (Gore-Tex or similar), loose enough to wear over trousers, for every landing
- [ ] Waterproof gloves or mittens, thin liner gloves for taking photos, and a spare pair
- [ ] 1 or 2 warm hats and a scarf or neck gaiter (wind-stopper, wool or fleece)

FOOTWEAR

- [ ] Waterproof boots (such as **'Muck Boots'**) are an essential item for beach landings and hiking in snowy/muddy terrain. These should be insulated, knee-high boots with sturdy high-traction soles, suitable for stepping into shallow water during tender landings and or walking on snow, ice and rocks. It is often easiest to use your waterproof boots for all excursions off the vessel, so comfort is important. Boots should have good ankle support and should not be too loose, heavy, or bulky
- [ ] Optional: Waterproof hiking boots (Gore-Tex), for anyone not comfortable in rubber boots
- [ ] Shoes, sandals or slippers with non-marking soles, for on board

Muck Boots will be provided on board (please let us know your shoe size) but if you prefer to bring your own, recommended types are:

https://www.muckbootcompany.com/
Models: Arctic Sport Tall, Arctic Ice Tall, Arctic Outpost Tall

https://www.bogsfootwear.com
Models: Classic High, Classic Ultra High, Bozeman Tall

EQUIPMENT

- [ ] Sturdy sunglasses with good UV and wind protection, plus a spare pair
- [ ] Sunblock, moisturizing lotion and lip balm
- [ ] A collapsible trekking pole, for ice, snow and rough ground
- [ ] Camera, lenses and memory cards
- [ ] Extra camera batteries or a power bank. Note that cold temperatures sap battery life much faster than in warmer climates, so you want to be prepared with extra batteries
- [ ] Water-resistant backpack, or a waterproof liner inside a regular one, for carrying cameras or other equipment ashore

BINOCULARS

- A quality pair of binoculars is essential for viewing distant wildlife and birds, and you'll find yourself using them frequently throughout the expedition.
- Image-stabilized binoculars are an excellent choice. Kite Optics offers field-tested image-stabilized models that are highly recommended by EYOS staff. Visit usa.kiteoptics.com for more information and 10% discount for EYOS guests - enter promo code EYOSKITE10 at check out

RECOMMENDED READING

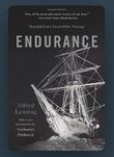

Antarctica: A Guide to the Wildlife

BY TONY SOPER · 8TH EDITION

Our favourite guide. Designed for the field, this compact handbook features all of the species of birds, seals and whales a traveler is likely to encounter on an Antarctic voyage.

FIND THE BOOK →

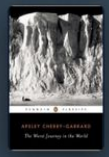

Endurance: Shackleton's Incredible Voyage

BY ALFRED LANSING

Lansing's gripping day-by-day story of Shackleton's legendary perseverance is essential reading for any Antarctic traveler. This 100th anniversary edition is outfitted with maps, an expanded selection of Frank Hurley's photographs and an introduction by Nathaniel Philbrick.

FIND THE BOOK →

The Worst Journey in the World

BY APSLEY CHERRY-GARRARD

Blending scientific ambition and human resilience, this masterpiece of polar exploration literature provides an account of the British Antarctic Expedition, a winter sledging trip for Emperor penguin eggs and Scott's race to the South Pole.

FIND THE BOOK →

The Home of the Blizzard

BY SIR DOUGLAS MAWSON

Mawson's gripping account of the struggle for survival with the Australian Antarctic Expedition with great tales of Antarctic discovery, adventure, courage, epic rescues and heroic endurance.

FIND THE BOOK →

Antarctica: An Intimate Portrait of the World's Most Mysterious Continent

BY GABRIELLE WALKER

Referred to as a "warm look at a cold place", Walker provides a more-modern and respectful exploration of the 7th continent's history, geography, wildlife and ice in this Antarctic primer.

FIND THE BOOK →

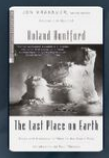

Dispatches from Continent Seven: An Anthology of Antarctic Science

BY REBECCA PRIESTLEY

From fascinating fossil evidence to the reasons behind Antarctica's surprising number of meteorites, this scientific anthology reveals over 200 years of research on Antarctica.

FIND THE BOOK →

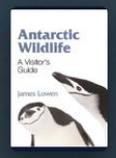

The Last Place on Earth: Scott and Amundsen's Race to the South Pole

BY ROLAND HUNTFORD

Igniting huge controversy when it first appeared, Huntford's rousing dual biography contrasts Amundsen's well-planned campaign to achieve the Pole with Scott's ill-fated quest.

FIND THE BOOK →

Antarctic Wildlife: A Visitor's Guide

BY JAMES LOWEN

A richly illustrated field guide that introduces readers to the remarkable wildlife of the Antarctic Peninsula, Drake Passage and Beagle Channel. Featuring detailed species descriptions, colour photographs and practical identification tips, it helps readers recognise penguins, seals, whales, seabirds and other wildlife they may encounter during an Antarctic expedition.

FIND THE BOOK →

RECOMMENDED VIEWING

Frozen Planet II

BBC · 2022

Episodes 1: *Frozen Worlds*, 2: *Frozen Ocean*, 4: *Frozen South* (especially) and 6: *Our Frozen Planet* will give great visual context for your upcoming expedition. This 6-part series, narrated by David Attenborough, explores the habitats, wildlife, global significance and fragility of the polar regions.

WHERE TO WATCH →

Frozen Planet

BBC & THE OPEN UNIVERSITY · 2011

A 2011 British nature documentary series, co-produced by the BBC and The Open University. It was filmed by the BBC Natural History Unit. The seven-part series focuses on life and the environment in both the Arctic and Antarctic. The production team were keen to film a comprehensive record of the natural history of the polar regions because climate change is affecting landforms such as glaciers, ice shelves, and the extent of sea ice.

WHERE TO WATCH →

Endurance

NATIONAL GEOGRAPHIC DOCUMENTARY FILMS · 2024

The film combines archival film and photographs captured by expedition photographer Frank Hurley from Ernest Shackleton's legendary 1914 Imperial Trans-Antarctic Expedition with the story of the discovery of the wreck of the Endurance in the Weddell Sea.

WHERE TO WATCH →

March of the Penguins

DIR. LUC JACQUET · 2005

A 2005 French feature-length nature documentary directed and co-written by Luc Jacquet, and co-produced by Bonne Pioche and the National Geographic Society. The documentary depicts the yearly journey of the emperor penguins of Antarctica.

WHERE TO WATCH →

Antarctica: Ice and Sky

DIR. LUC JACQUET · 2015

This biographical documentary chronicles the life and work of French glaciologist Claude Lorius, the first researcher to discover the link between greenhouse gasses and global warming. Take a closer look at ancient ice cores and air bubbles trapped deep within Antarctic ice.

WHERE TO WATCH →

Happy Feet 1 & 2

DIR. GEORGE MILLER · 2006 & 2011

For the younger viewers. Explore the Antarctic environment through the adventures of a tap-dancing Emperor penguin named Mumble while he quests to solve Antarctic emergencies from fish supply issues to iceberg entrapments.

WHERE TO WATCH →

Ages of Ice

PBS DOCUMENTARY SERIES · 2026

A three-part series that explores modern research of glacier movement, ice sheets, climate regulation by the polar oceans, Antarctic krill populations, air-eating microbes in Antarctica and many other topics.

WHERE TO WATCH →

The Great White Silence

HERBERT PONTING · 1924

A 1924 English documentary that contains brief cinematograph sequences taken during the Terra Nova Expedition of 1910–1913. The principal filmmaker was photographer Herbert Ponting. Originally a silent film, the documentary was restored and re-released in 2011 by the British Film Institute with a musical soundtrack by Simon Fisher Turner.

WHERE TO WATCH →

PHOTOGRAPHY TIPS

> Special considerations for photography in Antarctica.

- A super-wide lens is recommended for capturing the vast landscapes.
- Photographing distant wildlife such as whales or seabirds may require a fast, long lens or high zoom function. Image stabilized lenses are recommended.
- Because cold temperatures sap battery power, carry batteries close to your body to keep them warm, and carry spares.
- Protect your photographic gear from the elements. Rain and sea splash make waterproof bags essential.
- Always have your camera on a strap to avoid dropping it on deck or in the sea.
- Consider the weight of photo equipment you plan to carry ashore.
- A tripod is useful ashore but not practical for use on board the moving vessel. A monopod or beanbag can be useful to stabilize images taken from the vessel.
- Uploading large numbers of photos or video to the cloud may not be possible during the expedition due to limited internet speed on board, so plan on keeping your photos on your phone or computer.

USE OF REMOTELY PILOTED AIRCRAFT SYSTEMS

The term Remotely Piloted Aircraft Systems (RPAS) is used for any remote piloted aircraft, these are also referred to as a drone or UAV (Unmanned Aerial Vehicle). We would like to remind all travelers to Antarctica who are hoping to fly a RPAS / UAV / drone that IAATO Members have agreed to a ban on the recreational use of these aircraft in Antarctica. As EYOS is an IAATO member, and the yacht will be operating under EYOS' membership, we will abide by this ban.

YOUR GUIDES

EXPEDITION LEADER - ANTARCTIC

RICHARD WHITE

Richard is a full time Naturalist and Expedition Guide. He studied Biological Sciences at university in the UK but has learned far more from many years spent in the field. After graduating, he studied seabirds from ships and on remote islands. Although he did not know it at the time, this proved to be an excellent foundation for a career switch to working as a naturalist on expedition ships.

He first visited the Antarctic in 1998 as a researcher and quickly discovered a love for the icy land and seascapes. He has been a birdwatcher all his life but is also enthusiastic about all other aspects of natural history. While he is a birdwatcher and seabird biologist first, he will happily concede that he would rather spend time searching for and watching marine mammals rather than penguins. Any day spent in a Zodiac with whales is a great day. Richard possesses one of the sharpest pair of eyes for spotting wildlife.

When not on expedition ships Richard is based in Singapore; which has been home since 2015. While it is neither remote nor very wild, he continues to be pleasantly surprised by how much wildlife he can find in the city.

YOUR GUIDES

EXPEDITION GUIDE

IAN STRACHAN

Ian Strachan has been working on expedition vessels constantly since 2009, often spending more nights at sea than on land in a given year. As a natural history interpreter his aim is to translate the secret language of the landscape and wildlife so that they can fully appreciated and understood. Born in Mid Coast Maine but raised in the Far Northeast Coast of Australia, he benefited from an adventurous childhood in the outdoors. Being able to travel to the ends of the Earth on expeditions, visiting truly remote and wild regions, invokes equal sensations of exhilaration and privilege that can be found nowhere else. From transiting the once fabled Northwest Passage to dry suit diving below that Antarctic circle, his experiences in the polar regions have only strengthened his infatuation.

His passion for the icy environments means he will happily lecture away on anything from planktonic krill to towering glaciers and everything in between. While he thoroughly enjoys explaining the behaviors of the strange and unique wildlife, Ian will spend countless hours watching, and photographing, icebergs of all shapes, sizes and colors. With a sun that barely sets, every moment and every angle present a new frozen sculpture to marvel at. An avid and licensed drone pilot, he is also always happy to get a bird's eye view or help a new operator with the nuances of flying in challenging conditions. Whether it's on land, by zodiac, or underwater Ian is eager to share the wonders that await discovery in the wild corners of the globe he gets to explore.

When he's not talking about himself in the third person or photographing penguins, Ian can be somewhat reliably tracked down in central Oregon getting ready for the next adventure.

LIFE ON BOARD

YACHT: M/Y *HANSE EXPLORER*

HANSE EXPLORER

ACCOMMODATIONS

Hanse Explorer's accommodations for 12 adventurous guests are smart and nautical, in seven staterooms looked after by a crew of fifteen.

A large Owner's cabin opens onto a secluded deck.

SALOON AND DINING

A spacious saloon and adjacent dining room feature large windows to bring stunning scenery indoors, with glass-paned sliding doors out to the decks.

An expansive aft deck is used for frequent al fresco dining.

BRIDGE

There is easy access to the bridge and to the bow, perfect for watching wildlife. The bridge is a great place to hang out.

ICE CLASS AND STABILIZERS

Hanse Explorer was purpose-built with a high commercial ice class (GL E3, equivalent to Finnish A1). Zero-speed fin stabilizers reduce rolling and increase comfort at sea.

HANSE EXPLORER

HEALTH AND WELLNESS

Guests can relax in the saltwater Jacuzzi or the light wood sauna after a day of exploring.

The sauna and the fitness room sit beside the aft platform.

MEALS

All meals are prepared by the onboard culinary team.

Please advise us well in advance of any special dietary information, allergies or preferences.

DECK SPACES

Up top, a Jacuzzi and outdoor seating await on a top deck the refit opened up for guests. A cocktail area has a Bose sound system.

TENDER OPERATIONS

Two Mark IV Zodiacs with Yamaha 4-stroke engines are used for shore landings and open water cruising.

SAFETY

In accordance with the International Convention for Safety of Life at Sea (SOLAS), a full safety briefing and guest drill will be conducted at the beginning of each voyage.

CAPTAIN AND CREW

Her two longtime captains have worked on the ship for over 10 years and on all expeditions with EYOS, with unrivaled navigational experience in the Arctic and Antarctic.

IMMIGRATION

Please check all visa and immigration regulations, and any required vaccinations carefully as these are your responsibility.

DEVELOPED BY IAATO

VISITOR GUIDELINES

Recommendation XVIII-1, adopted at the Antarctic Treaty Meeting, Kyoto, 1994.

Activities in the Antarctic are governed by the Antarctic Treaty of 1959 and associated agreements, referred to collectively as the Antarctic Treaty System. The Treaty established Antarctica as a zone of peace and science.

In 1991, the Antarctic Treaty Consultative Parties adopted the Protocol on Environmental Protection to the Antarctic Treaty, which designates the Antarctic as a natural reserve. The Protocol sets out environmental principles, procedures and obligations for the comprehensive protection of the Antarctic environment, and its dependent and associated ecosystems. The Consultative Parties have agreed that, pending its entry into force, as far as possible and in accordance with their legal system, the provisions of the Protocol should be applied as appropriate.

The Environmental Protocol applies to tourism and non-governmental activities, as well as governmental activities in the Antarctic Treaty Area. It is intended to ensure that these activities do not have adverse impacts on the Antarctic environment, or on its scientific and aesthetic values.

This Guidance for Visitors to the Antarctic is intended to ensure that all visitors are aware of, and are therefore able to comply with, the Treaty and the Protocol. Visitors are, of course, bound by national laws and regulations applicable to activities in the Antarctic.

KEY POINTS

- **Maintain a distance of at least 5 meters (15 feet) from wildlife at all times.**
- **Do not sit, kneel, crouch, or lay down in wildlife areas.**
- **Do not feed, touch, or handle birds or seals, or approach or photograph them in ways that cause them to alter their behavior.**
- **Take note of, and act on, the advice and instructions from your leaders; do not stray from your group.**
- **Do not collect or take away biological or geological specimens or man-made artifacts as a souvenir, including rocks, bones, eggs, fossils, and parts or contents of buildings.**
- **Before you leave home, ensure that anything that may come into contact with the Antarctic environment, including clothing and equipment, is thoroughly cleaned and disinfected.**

PROTECT ANTARCTIC WILDLIFE

- Harmful interference with Antarctic wildlife is prohibited except in accordance with a permit issued by a national authority.
- Do not use aircraft, vessels, small boats, or other means of transport in ways that disturb wildlife, either at sea or on land.
- Do not feed, touch, or handle birds or seals, or approach or photograph them in ways that cause them to alter their behavior. Special care is needed when animals are breeding or molting.
- Do not damage plants, for example by walking, driving, or landing on extensive moss beds or lichen-covered scree slopes.
- Do not use guns or explosives. Keep noise to the minimum to avoid frightening wildlife.
- Do not bring non-native plants or animals into the Antarctic such as live poultry, pet dogs and cats or houseplants.

RESPECT PROTECTED AREAS

- A variety of areas in the Antarctic have been afforded special protection because of their particular ecological, scientific, historic or other values. Entry into certain areas may be prohibited except in accordance with a permit issued by an appropriate national authority. Activities in and near designated Historic Sites and Monuments and certain other areas may be subject to special restrictions.
- Know the locations of areas that have been afforded special protection and any restrictions regarding entry and activities that can be carried out in and near them.
- Observe applicable restrictions.
- Do not damage, remove, or destroy Historic Sites or Monuments or any artefacts associated with them.

RESPECT SCIENTIFIC RESEARCH

- Do not interfere with scientific research, facilities or equipment.
- Obtain permission before visiting Antarctic science and support facilities; reconfirm arrangements 24-72 hours before arrival; and comply with the rules regarding such visits.
- Do not interfere with, or remove, scientific equipment or marker posts, and do not disturb experimental study sites, field camps or supplies.

KEEP ANTARCTICA PRISTINE

- Antarctica remains relatively pristine, the largest wilderness area on Earth. It has not yet been subjected to large-scale human perturbations. Please keep it that way.
- Do not dispose of litter or garbage on land. Open burning is prohibited.
- Do not disturb or pollute lakes or streams. Any materials discarded at sea must be disposed of properly.
- Do not paint or engrave names or graffiti on rocks or buildings.
- Do not collect or take away biological or geological specimens or man-made artifacts as a souvenir, including rocks, bones, eggs, fossils, and parts or contents of buildings.
- Do not deface or vandalize buildings, whether occupied, abandoned, or unoccupied, or emergency refuges.

BE SAFE

- Be prepared for severe and changeable weather and ensure that your equipment and clothing meet Antarctic standards. Remember that the Antarctic environment is inhospitable, unpredictable, and potentially dangerous.
- Know your capabilities, the dangers posed by the Antarctic environment, and act accordingly. Plan activities with safety in mind at all times.
- Keep a safe distance from all wildlife, both on land and at sea.
- Take note of, and act on, the advice and instructions from your leaders; do not stray from your group.
- Do not walk onto glaciers or large snowfields without the proper equipment and experience; there is a real danger of falling into hidden crevasses.
- Do not expect a rescue service. Self-sufficiency is increased and risks reduced by sound planning, quality equipment, and trained personnel.
- Do not enter emergency refuges except in emergencies. If you use equipment or food from a refuge, inform the nearest research station or national authority once the emergency is over.
- Respect any smoking restrictions, particularly around buildings, and take great care to safeguard against the danger of fire. This is a real hazard in the dry environment of Antarctica.

2026-27 AVIAN INFLUENZA PROTOCOLS

Since 2021, the increasing intensity of highly pathogenic avian influenza (HPAI) H5N1 outbreaks has resulted in the deaths of hundreds of thousands of seabirds worldwide. Marine mammals, including seals and sea lions, have also been affected. On February 25, 2024, the first cases of avian influenza were confirmed in the Antarctic Treaty Area. Since then, HPAI has been detected in multiple locations on the Antarctic Peninsula. The Antarctic community, from Antarctic Treaty parties to scientists, National Antarctic Programs, and the International Association of Antarctica Tour Operators (IAATO), is concerned about the effect of avian influenza in Antarctica, the profound impact its spread could have on the local wildlife, and the risk it could pose to humans. IAATO members are committed to the robust procedures in place to protect Antarctica from pathogens and non-native species. With the confirmation of avian influenza in the region, we continue to maintain heightened vigilance regarding operations this season. Here is how you can help prevent avian influenza from being introduced and spread.

BEFORE YOU GO

- Before you leave home, ensure that anything that may come into contact with the Antarctic environment, including clothing and equipment, is thoroughly cleaned and disinfected.
- Use IAATO's Don't Pack a Pest guidance to assist you.

IN ANTARCTICA · VISITING WILDLIFE

- Existing protocols, including daily biosecurity procedures, are crucial to protecting Antarctica. In addition, it is required that you:
- Maintain a distance of at least 5 meters (15 feet) from wildlife at all times.
- Do not sit, kneel, crouch, or lay down in wildlife areas.
- Do not place any equipment on the ground or snow in wildlife areas. Your operator will keep you informed, and if in doubt, please ask your guides for direction.

DON'T PACK A PEST · NON-NATIVE SPECIES IN ANTARCTICA

Non-native species are those species that do not naturally occur in an area and have been introduced either intentionally or unintentionally. A wide range of non-native species now occur in Antarctica and the sub-Antarctic islands. These introduced species include microbes, algae, fungi, plants, invertebrates, fish, birds and mammals.

Despite known introductions of non-native species, Antarctica remains a relatively pristine environment. Human activity has the potential to act as a vector for non-native species. Across the continent, science programs and tour operators are working to minimize the risk of humans being a vector for transporting non-native species into and within the Antarctic.

Types of non-native species that have already arrived in Antarctica: seeds, grasses, algae, fruit flies, worms, spiders, midges, microorganisms.

Lessons learned for Antarctica from the sub-Antarctic: human activities in the sub-Antarctic islands have contributed to a large number of introductions of non-native species both intentional (rabbits and reindeer for food) and unintentional (mice, rats, worms and grasses). Approximately 200 non-native species exist on the islands. These species have come to survive in, and in some cases dominate, terrestrial, freshwater and marine habitats, often causing alterations to the ecosystems through extinction or decreased abundance of native species.

BEFORE YOU ARRIVE · ONCE YOU HAVE ARRIVED

- Clean and examine clothes thoroughly: examine all clothing, including pockets, seams, Velcro fasteners, and boot soles for dirt and organic material. A thorough cleaning is recommended.
- Pay special attention to boots and soles, trouser hems and turn-ups, pockets, Velcro and fleece, backpacks, outdoor equipment and camera bags, walking sticks and tripods.
- Pack clean gear: make sure your gear and outdoor equipment are freshly cleaned and free of dirt and organic material.
- Follow the boot and clothing decontamination procedures on your expedition. This is especially important if you are moving between distinct geographic regions, for example between a sub-Antarctic Island and the Antarctic Peninsula, but also if moving between distinct landings or field sites.
- Watch your step. Be careful when walking in areas that contain organic matter as this can be easily transported to other areas. If you do notice organic matter on boots, clothing or gear, make sure to clean it off before leaving a site and use the disinfectant wash between visits.
- Clean your gear regularly. This includes boots, equipment, day packs and camera bags, trouser hems and turn-ups, fleece clothing, Velcro fasteners for outer clothing.
- Report a pest. Tell your guides if you think you have found a non-native species.
- Spread the word. Share this information with others. We all contribute to the health of Antarctica.

ABOUT US

THE EYOS TEAM

ABOUT US

Your expedition will be supported by both an on-board EYOS Expedition Leader and a strong shore-based team on hand to provide 24/7 support for the duration of the voyage. Together we are underpinned by several decades of Antarctic experience.

We are passionate about the Antarctic and genuinely look forward to sharing it with you. Although our field staff members have completed hundreds of expeditions in polar latitudes, we have never lost our enthusiasm for ice and the experiences that it provides.

IAATO

EYOS Expeditions is an active member of the International Association of Antarctica Tour Operators.

IAATO is a member organisation founded in 1991 to advocate, promote and practice safe and environmentally responsible private-sector travel to the Antarctic.
